SOUTH AFRICA

Anglo American Platinum - Dishaba mine

In 2019, the industry saw a 37% improvement in safety performance with 51 fatalities.

OVERVIEW OF PERFORMANCE TO DATE

Significant strides in improving industry safety and health performance in recent years have been possible through the collaborative efforts of employees and unions, the support of the Department of Mineral Resources and Energy (DMRE), and mining companies. These efforts have helped contribute to a 92% fall in fatalities since 1993, from 615 in 1993 to 51 in 2019.

A sharp regression was, however, recorded in 2017 with 90 fatalities. This prompted the Minerals Council South Africa Board, through the CEO Zero Harm Forum, to initiate a number of measures to address the industry's safety performance.

In August 2018, the Minerals Council launched the National Day of Safety and Health in Mining campaign, fulfilling the objectives of the annual company health and safety days outlined in the Tripartite Pledge signed at the Mine Health and Safety Summit in November 2016.

The National Day of Safety and Health in Mining signalled the start of an initiative for member and non-member companies to visibly and publicly reaffirm their commitments to health and safety. Over the months that followed, health and safety days were hosted at 93 operations around the country, and the improving safety trend continued.

But the Minerals Council acknowledged that further collective efforts were necessary to achieve zero harm, and the 2024 Mine Health and Safety Council (MHSC) milestones agreed to by companies, government and labour. In January 2019, the CEO Zero Harm Forum held the CEO Heartfelt Conversations, an event to facilitate meaningful engagement amongst mining CEOs on health and safety-related issues. The Heartfelt Conversations examined a number of crucial issues, particularly in respect of visible leadership. A direct outcome of the event was the establishment of a CEO-led strategy on health and safety, Khumbul'ekhaya.

Khumbul'ekhaya, a Nguni word meaning “remember home”, is a rallying cry for a step-change in health and safety performance, driven at the highest levels of our industry. Formally launched on 1 October 2019, this strategy promotes a holistic approach to the elimination of fatalities as a result of both safety and health incidents. The National Day of Safety and Health in Mining continued in October, with companies rolling out the Khumbul'ekhaya messaging on mine over the final months of the year. In 2019, the total number of fatalities was 51 – an improvement of 37% on the year before.

2020 MILESTONES

Fatalities	Every fatality is one too many. We will eliminate fatalities by December 2020. During the 2014 MHSC Summit, all stakeholders agreed that we needed to accelerate the elimination of fatalities.
Injuries	Since 2003, there has been an overall reduction in injuries by 44%.
